# **1. Introduction**

## **1.1 Purpose**

The purpose of this system is to take the hassle out of managing veterinary hospitals and shelters. By offering an easy-to-use platform, it helps veterinarians, shelter staff, and even pet owners work together seamlessly. From tracking medical histories to scheduling appointments and overseeing shelter operations, this system is built to make things easier and more efficient.

## **1.2 Product Scope**

This system is designed to handle all the essential tasks of veterinary hospitals and shelters. It helps veterinarians manage medical records, ensures appointments are scheduled without overlaps, and keeps track of animals in shelters. Additionally, the system provides features for generating travel certificates for pets, enabling online checkups, and allowing users to refer friends to the hospital or shelter. The goal is to provide a one-stop solution that everyone can rely on.

## **1.3 Title**

### **Veterinary Hospital and Shelter Management System**

## **1.4 Objectives**

The system aims to simplify scheduling and record-keeping, making it easier for staff to manage daily operations efficiently. It helps shelters track animals and streamline adoption processes while enhancing communication between staff and pet owners. By providing tools to better organize resources and processes, the system ensures higher-quality care for animals and improves overall management.

## **1.5 Problem Statement**

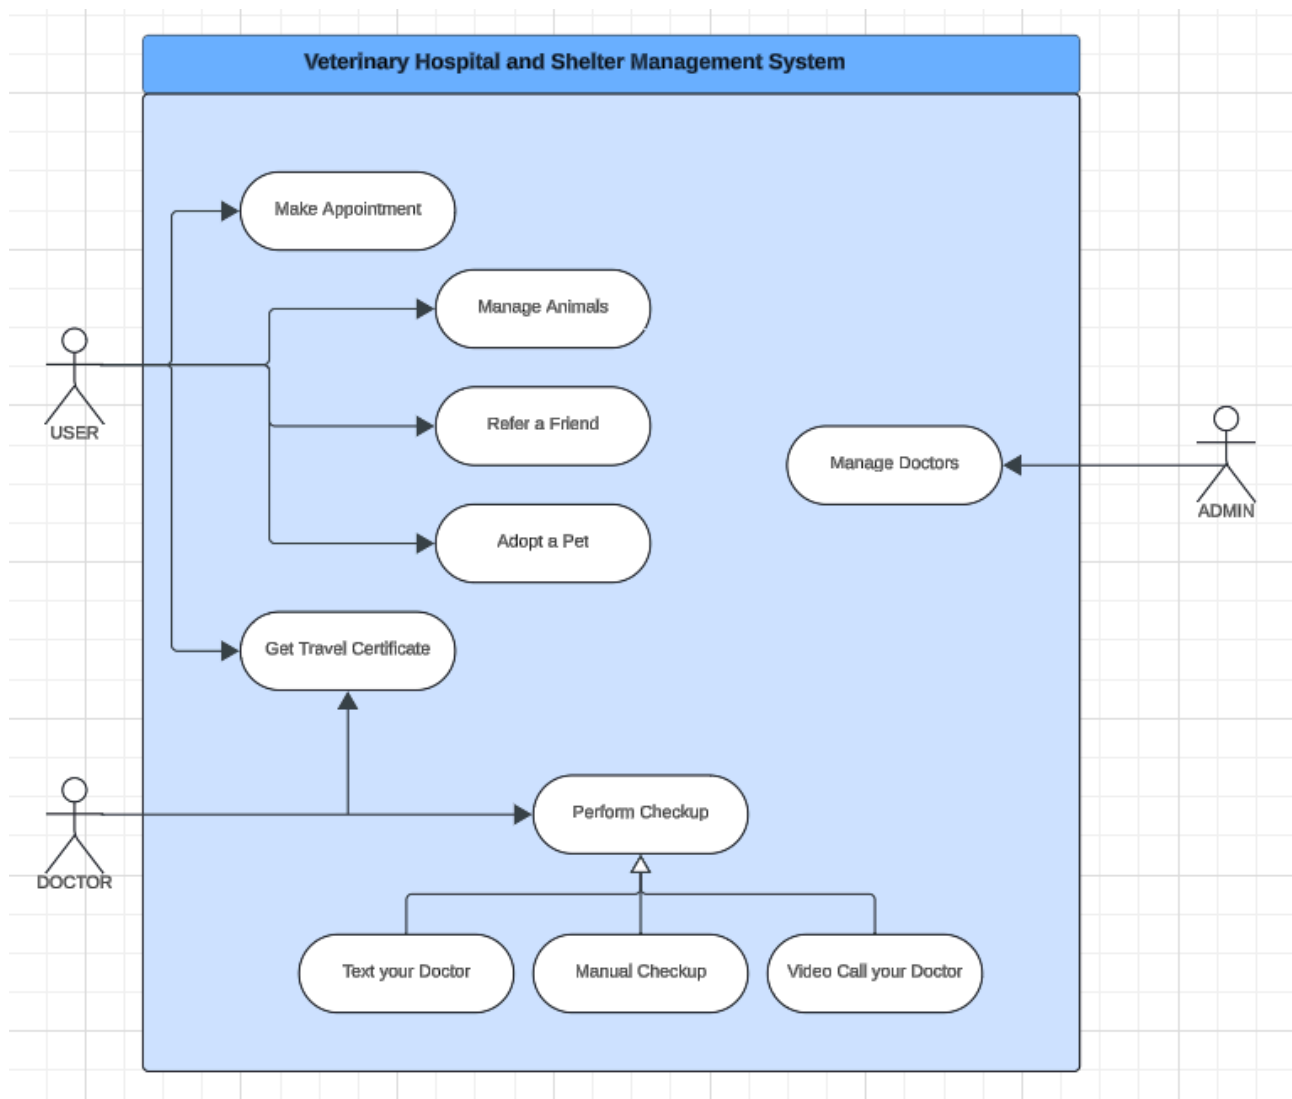

Running a veterinary hospital or a shelter can be chaotic when everything is done manually. It's easy to lose track of important details, whether it's a pet's medical history or a shelter animal's adoption status. This often results in unnecessary delays and poor service. By introducing a digital solution, we can simplify these operations, save time, and improve care for the animals who need it most.

## 2. Overall Description

### 2.1 List of Use Cases

- Manage Animals
- Adopt a Pet
- Book Appointment
- Refer a Friend
- Get a Travel Certificate
- Manage Animals
- Manage Doctors
- Get a Checkup

### 2.2 Use Case Diagram

### **3. Other Nonfunctional Requirements**

#### **3.1 Performance Requirements**

The system must handle multiple users simultaneously, ensuring quick access to features like records and appointments with a response time of under 3 seconds. It should process large datasets efficiently, even during peak usage.

#### **3.2 Safety Requirements**

Data integrity and reliability are crucial, with backup mechanisms in place to prevent loss due to hardware failures or accidental deletions. The system must operate consistently without crashing.

#### **3.3 Software Quality Attributes**

The system will be user-friendly, reliable, and scalable to accommodate growth. It will also support maintainability, ensuring easy updates and minimal disruptions.

#### **3.4 Business Rules**

Appointments require mutual confirmation, travel certificates can only be issued by authorized staff, and shelter animals must pass health checks before adoption. Referral bonuses will be validated before application.

#### **3.5 Operating Environment**

The Veterinary System application is designed to operate on modern hardware platforms with minimum requirements of a dual-core CPU, 4 GB RAM, and 500 MB of free disk space. It supports Windows 10 or later, macOS Mojave or later. The application is built using Java 17 and JavaFX for the user interface, with MySQL 8.0 for database management and JDBC for data connectivity.

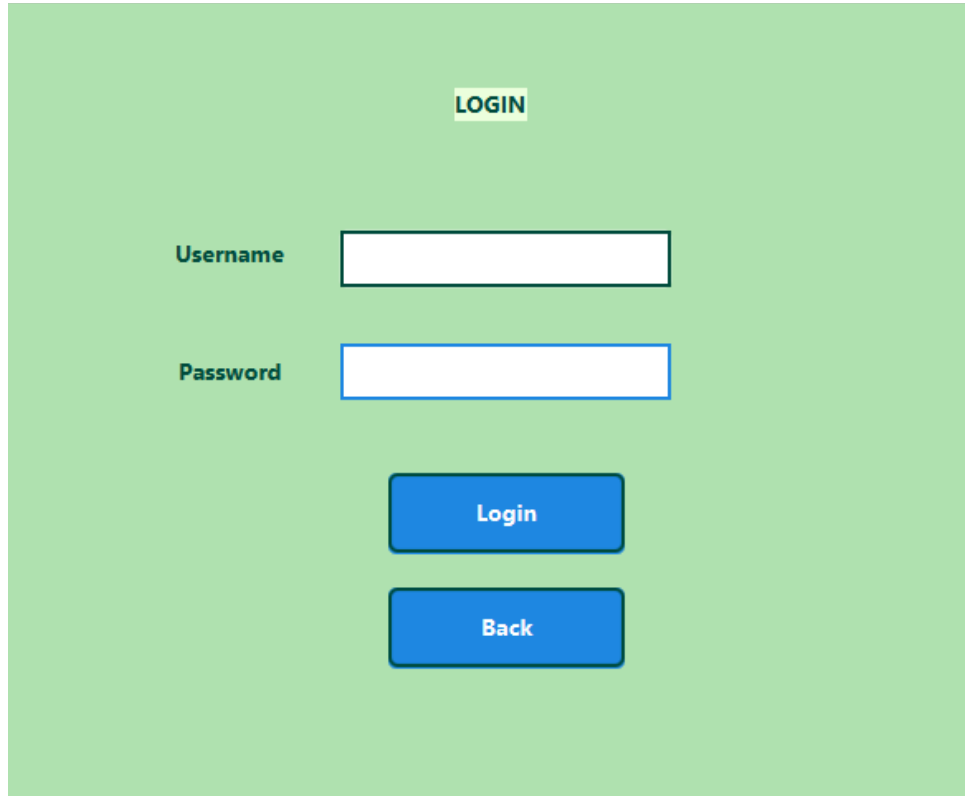

#### **3.6 User Interfaces**

The interfaces include Login/Register interface, User interface, Doctor interface, Admin Interface. User interface has book an appointment, request a travel certificate, adopt a pet and refer a friend interfaces.

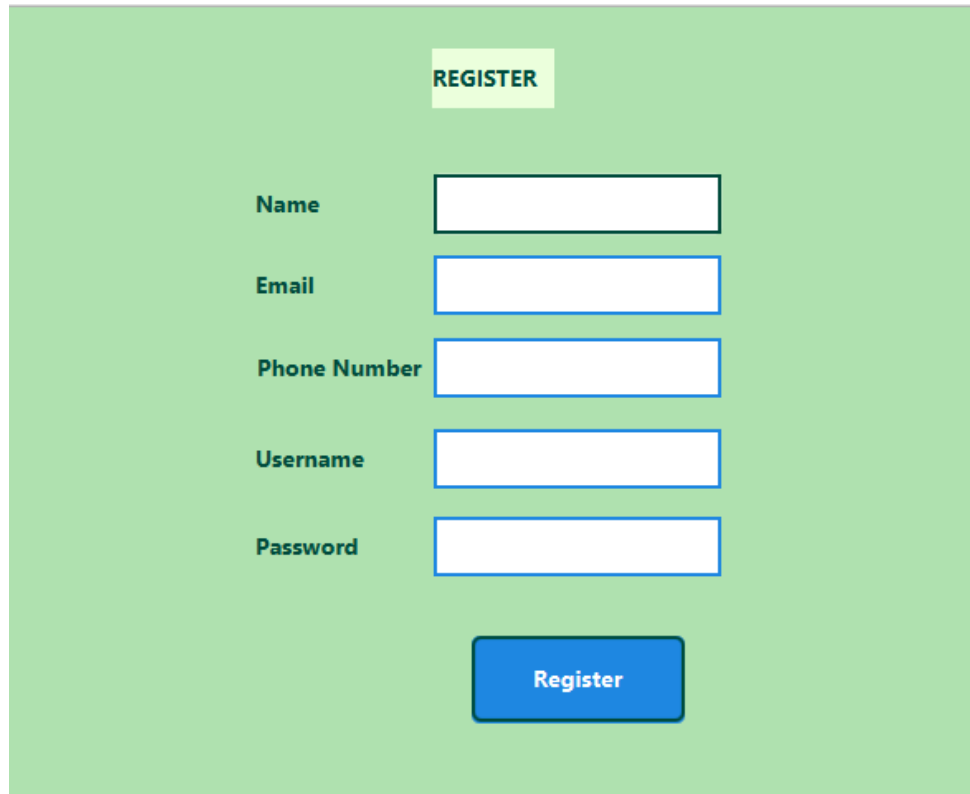

Doctor interface has checking its appointments, performing/approving checkup and approving travel certificates.

Admin interface has added the doctor.

i. Login and Register Interfaces

A login interface mockup on a light green background. At the top center is a yellow rectangular button with the text "LOGIN" in black. Below this, there are two input fields. The first is labeled "Username" in black text to its left; the input field itself is white with a black border. The second is labeled "Password" in black text to its left; the input field is white with a blue border. Below the input fields are two blue buttons with black text. The first button is labeled "Login" and the second button is labeled "Back".

A registration form titled "REGISTER" on a light green background. It contains five input fields: Name, Email, Phone Number, Username, and Password, each with a corresponding label to its left. Below the fields is a blue "Register" button.

**REGISTER**

Name

Email

Phone Number

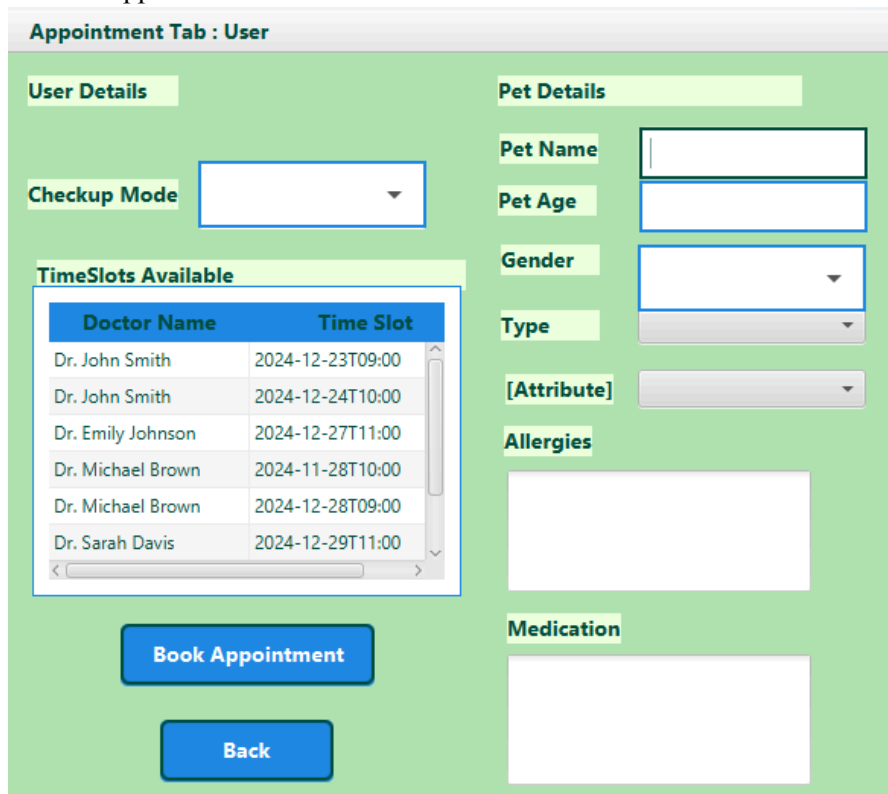

Username

Password

**Register**

ii. User Interface

- a. Book an appointment

An appointment booking form titled "Appointment Tab : User" on a light green background. It is divided into two main sections: "User Details" and "Pet Details".

**Appointment Tab : User**

**User Details**

Checkup Mode

**TimeSlots Available**

Doctor Name	Time Slot
Dr. John Smith	2024-12-23T09:00
Dr. John Smith	2024-12-24T10:00
Dr. Emily Johnson	2024-12-27T11:00
Dr. Michael Brown	2024-11-28T10:00
Dr. Michael Brown	2024-12-28T09:00
Dr. Sarah Davis	2024-12-29T11:00

**Book Appointment**

**Back**

**Pet Details**

Pet Name

Pet Age

Gender

Type

[Attribute]

**Allergies**

**Medication**

## b. Refer a Friend

**Refer A Friend**

**Refer Us to A Friend**

**Friend Details**

**Name**

**Email**

**Refer Friend**

**Back**

## c. Adopt an animal

**Adoption**

Pet Name	Type	Age	Gender	Attribute
Max	Dog	3	Male	Golden Retriever
Bella	Cat	2	Female	Black
Luna	Dog	4	Female	Poodle
Oliver	Cat	5	Male	White
Milo	Dog	2	Male	Beagle
Daisy	Bird	3	Female	65.0
Simba	Cat	4	Male	Tabby
Coco	Bird	2	Female	112.0
Buddy	Dog	6	Male	German Shepherd

**Adopt**

**Back**

## d. Get travel certificate

**Menu**

**Get Travel Certificate for Pet**

**Choose Pet**

In order to request a Travel Certificate for your pet, you must first schedule an appointment with your doctor for a Credibility check up.

**Book a Credibility Appointment**

**Certificate Approval PENDING**

**Generate Certificate**

**Back**

iii. Doctor Interface

## a. Check appointments

Appointment : Doctor

Username	Animal Name	Date-Time	Type of Checkup
Alice Johnson	Luna	2024-11-24T09:00	Manual
Bob Smith	Bella	2024-11-25T14:30	Text your Doctor

BACK

Add your time slot

Date

Starting Time

ADD

## b. Perform Checkups

Checkup : Doctor

Appointm...	Username	Animal Name	Type of Chec...	Checkup Stati
10	Alice Johnson	Luna	Manual	Performed
11	Bob Smith	Bella	Text your Doctor	Performed

BACK

Animal History

Allergies: Dust  
Medications: Nasal spray

Hours taken for Checkup

CHECKUP DONE

## c. Approve Travel certificate

▼ Travel Certificate : Doctor

Checkup#	Username	Animal Name	Checkup Status
8	Bob Smith	Bella	Checkup Performed
9	Charlie Brown	Bella	Checkup Not Performed
7	Alice Johnson	Luna	Checkup Performed

BACK APPROVE

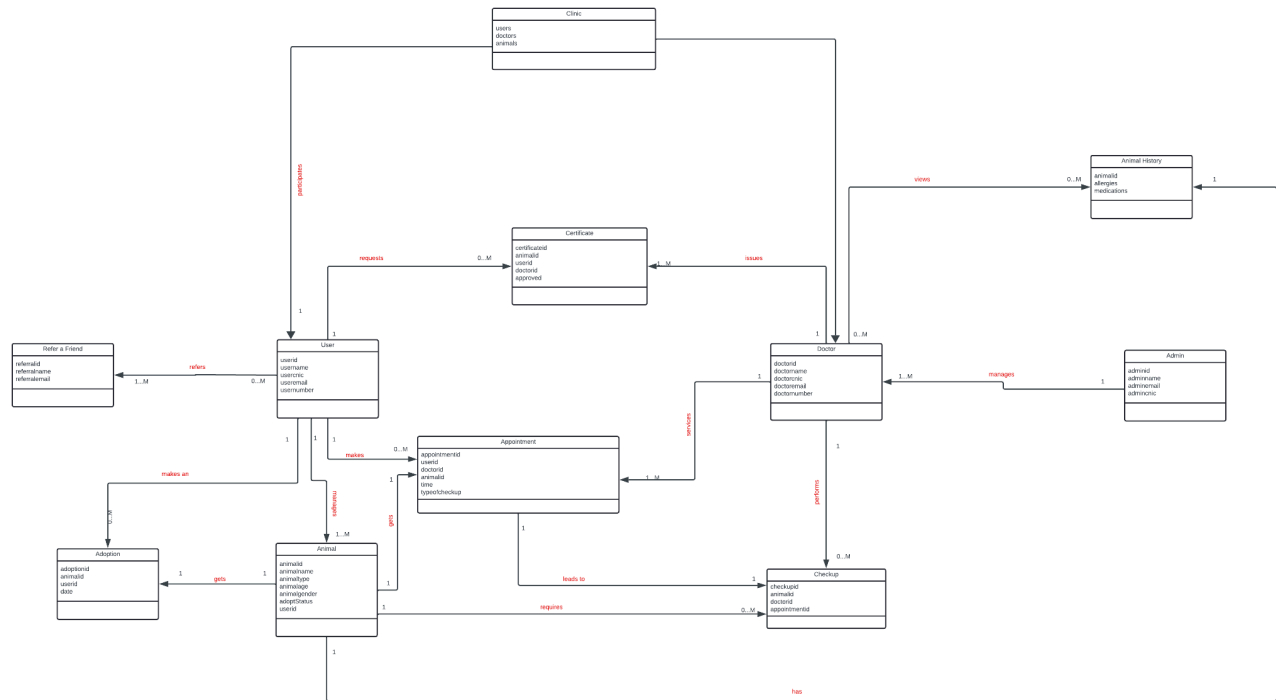

## iv. Admin

▼ Add doctor

Name	<input type="text"/>
Email	<input type="text"/>
Contact Number	<input type="text"/>
Appointed Username	<input type="text"/>
Appointed Password	<input type="text"/>
